

Dynamic Caller ID

App Overview

Caller ID masking to ensure
your calls get answered

Dynamic Caller ID

Overview

Ensure your outbound business calls are answered and reduce the likelihood of your calls being screened with Dynamic Caller ID. This application allows you to set unique rules that modify the caller ID display based on the outgoing phone in just three easy steps. You can set rules that match a feature code, area code(s), or a Regular Expression. Once set, each outgoing call that matches the pattern can display a modified phone number on the caller ID screen.

With the Dynamic Caller ID app, you can:

- Modify your outbound caller ID number
- Create rules using a feature code, preset area code, or regular expression
- Turn rules on and off with the click of a button
- Select the caller ID to display based on each rule

The screenshot displays the 'Dynamic CallerID' application interface. A modal dialog titled 'New Dynamic Caller ID Rule' is open, allowing users to create a new rule. The dialog contains the following fields and options:

- Name:** A text input field with the placeholder 'My New Rule'.
- Caller ID to Display:** A text input field containing '(949) 229-3050'.
- Matching Criteria:** Three radio button options:
 - ☒ Use Caller ID when Feature Code dialed matches
 - ☐ Use Caller ID when Area Code dialed matches
 - ☐ Use a Regular Expression (RegEx) Advanced
- Feature Code Field:** A text input field containing '*123'.
- Buttons:** 'Cancel' and 'Create Rule' buttons at the bottom right.

The background interface shows a 'Create New Rule' button and a table with columns for 'STATUS', 'RULE NAME', and 'ACTION'. The table lists two rules: 'jackso' and 'Kerber'.

Highlights

Dynamic Caller ID

Create New Rule <input type="text" value="Search"/>				
STATUS	RULE NAME	CALLER ID DISPLAY	DATE ADDED	ACTION
<input checked="" type="checkbox"/>	jacksonville	+15033587505	04/23/2019	Edit Delete
<input checked="" type="checkbox"/>	Kerber Test	+18282147492	07/31/2019	Edit Delete

Rule Dashboard

View all existing rules and create new rules in one simple interface. The Rule Dashboard shows all rules, along with key details about each rule, and has a search bar so you can quickly find the rule you're looking for. The dashboard also include the option to edit or delete rules.

Create New Rules

Creating new rules is simple and easy - all you need to do is name your rule, select the Caller ID you want to display, and the rule that will enable it.

New Dynamic Caller ID Rule

Name

My New Rule

Caller ID to Display

(949) 229-3050

☒ Use Caller ID when Feature Code dialed matches

☐ Use Caller ID when Area Code dialed matches

☐ Use a Regular Expression (Regex) **Advanced**

Cancel

Create Rule

☒ Use Caller ID when Feature Code dialed matches

☐ Use Caller ID when Area Code dialed matches

☐ Use a Regular Expression (Regex) **Advanced**

3 Options for Enabling Rules

When creating a new rule, there are 3 options to select from that will enable the rule: Feature Code, area code, and Regular Expression. The Feature Code rule allows you to create a feature code to use prior to dialing an outbound number, the area code rule is enabled when the provided area code is dialed, and a Regular Expression is used for pattern matching against the number being called.

Dynamic Caller ID

Technical Specifications

Caller ID Rule Dashboard

- Create new rule
- View existing rules including:
 - Status
