

Blacklists

App Overview

Block unwanted incoming calls in a few clicks

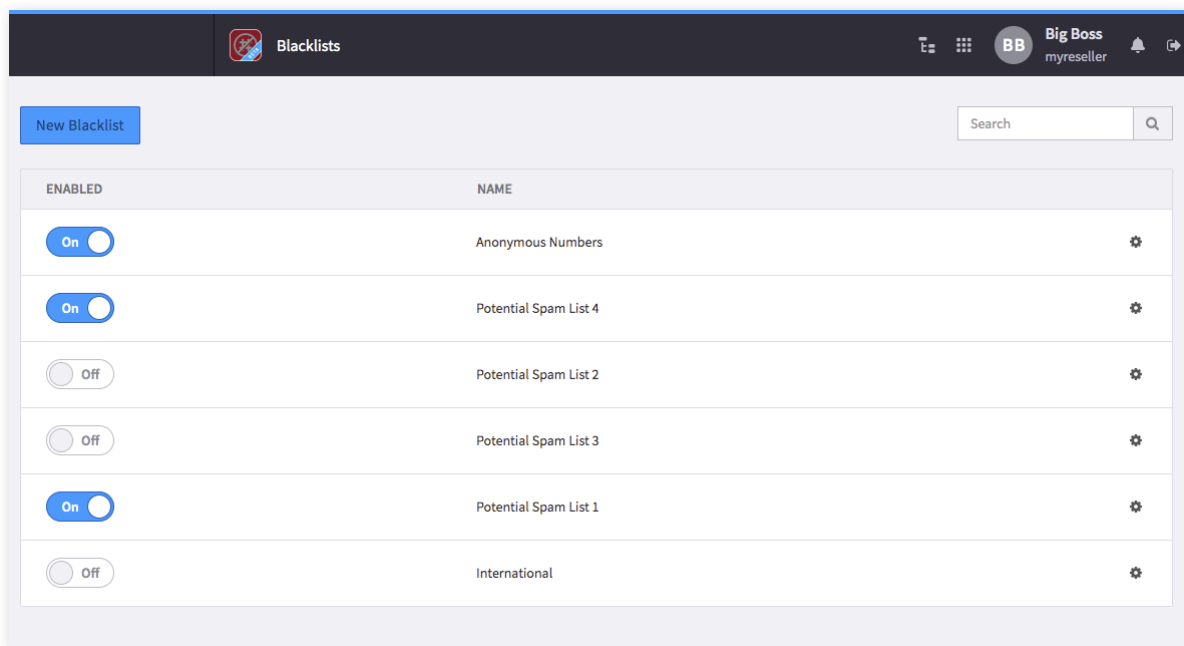

Blacklists

Overview

Easily filter out unwanted calls before they ring! From robo-calls to anonymous numbers, you can create a blacklist in just a few clicks of a button and enable or disable your blacklists as needed. The Blacklist app simplifies the creation of blacklists so you can go about your day undisturbed by potential spam and other common call types.

With the Blacklists app, you can:

- Create blacklists
- Block calls from anonymous numbers
- Block calls from specific numbers
- Manage your blacklists
- Turn your blacklists on and off as needed

Highlights

Blacklists

Create Blacklists

Simply create a Blacklist by giving your list a name and specifying if you want the numbers to be deactivated immediately. If not, the system will save the information you enter and you can turn the list on later.

The screenshot shows a form titled "Configure your Blacklist". It has two main fields: "Name" with the value "Potential Spam List 5" and "Enable on Creation" with a toggle switch set to "Off". At the bottom, there are two buttons: "Next" (blue) and "Cancel" (grey).

The screenshot shows a form titled "What Numbers to Block?". It has a sub-header "Enable at least one type of numbers to block for your blacklist." Below this are two toggle switches: "Block Anonymous Numbers" (set to "Off") and "Block Specific Numbers" (set to "On"). There is a text input field labeled "Enter Numbers to Block" containing the number "7049808810". Below the input field is a blue "Add Numbers" button. Underneath, it says "Numbers on This Blacklist (1)" and shows a list with one entry: "+1 707 200 7591" with a US flag icon and a close button. At the bottom are "Back" and "Create Blacklist" buttons.

Numbers to Block

Choose whether you want to block anonymous numbers or specific numbers. If you choose to block specific numbers, you can enter in multiple numbers at once, separated by a comma.

Manage Your Blacklists

At any time, you can manage your lists. Change the list name, enable or disable it, or update the blocked numbers.

The screenshot shows a "Details" form for a blacklist named "Anonymous Numbers". It has three toggle switches: "Enabled" (set to "Off"), "Block Anonymous Numbers" (set to "On"), and "Block Specific Numbers" (set to "Off"). At the bottom, there are three buttons: "Delete" (red), "Cancel" (grey), and "Save Changes" (blue).

Blacklists
