

comm.land is 2600Hz's user portal that brings all of an end user's communication tools into one intuitive UI. 2600Hz completely reimagined our UCaaS offering for today's distributed workforce. comm.land can now be deployed as a desktop application or within a browser window—ensuring that users can always collaborate within their enterprise persona, whether they're in the office or at home. Add to that comm.land's ability to embed third-party applications within the UI and you've got an end user portal built for the modern workplace.

Key Features

Integrate any third-party application or tool

Deploy within a web browser or desktop app

Host or join a video conference

Toggle between voice, video, and screenshare with webphone

Access call history, parked calls, voicemail within the webphone

Empowering Today's Distributed Workforce

Your end users have never demanded more of their phone system. Ensure they have the features and functionality to be more productive than ever with 2600Hz's comm.land.

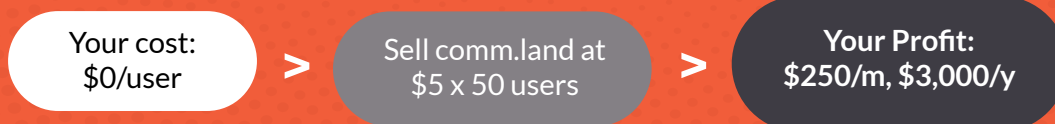

comm.land gives end users all of their personalized communication channels, including video conferencing, chat, and webphone, in a single UI. While end users will enjoy an elegant webphone and user portal, their administrators will appreciate a highly configurable PBX with complex callflow capabilities, office hours and holiday management, virtual assistants, and powerful APIs for customization and integrations.

Start offering your clients a best-in-class collaboration solution today!
