

COMM.LAND 2.5.6

Updates and improvements have been made across various features and functionalities of the system, including:

- Resolved an issue where international numbers cannot be redilled with a + prefix within call history.
- Improved Title wording when editing queue.
- Improved Scrolling capabilities with Call Center member management.
- Resolved instances where phone actions are disabled on an active call.
- Improved Conference websocket reconnections.
- Resolved an issue where pinned workspace/application is not persistent.
- Resolved an issue where the dial pad does not close after removing the call.
- Improved conference participants retrieval list.
- Filtered out parked calls when attended is true.
- Resolved selected speaker and microphone in the Audio Visualizer.
- Resolved the request to fetch call-in numbers. Used the user account for feedback.
- Reset skills dropdown.
- Resolved an issue retrieving callflows.
- Resolved hold treatment pause input not allowed to edit.
- Resolved an instance where CDD status updated while monitoring queue call.
- Added a loading icon while waiting for a response from media APIs.
- Resolved toast notification placement.
- Resolved an instance where spare numbers were not listed.
- Resolved "undefinedconf" when there is no main conference number.
- Improved grid sizing on call-in numbers.
- Updated the way that local mute/unmute is handled.
- Resolved call-forward not being updated when the config is changed in the monster UI or through Comm.Land dial-pad.
- Resolved instances where conference duration is incorrect.
